

NBR CAPACITY INCREASE

Altamira, Mexico

March 20th, 2026

Dynasol is pleased to announce a capacity expansion in its Altamira, Tamaulipas facility, specifically in the production of nitrile butadiene rubber.

We have invested to address the current capacity constraints and will produce an additional volume of 11 million pounds starting in June 2026.

Our NBR technology is supported by over three decades of expertise and has been developed in-house and in collaboration with our strategic partners worldwide.

The current portfolio of NBR grades comprises over forty products, and we maintain a global presence, including a joint venture in China.

Dynasol's NBR grades for the compounding market are widely used in applications such as sponge, footwear, wire and cable, plastic modification, seals, rolls, hoses and adhesives.
