

National Binder Technician
Certification (NBTC)-2024

OUR TECHNICIANS

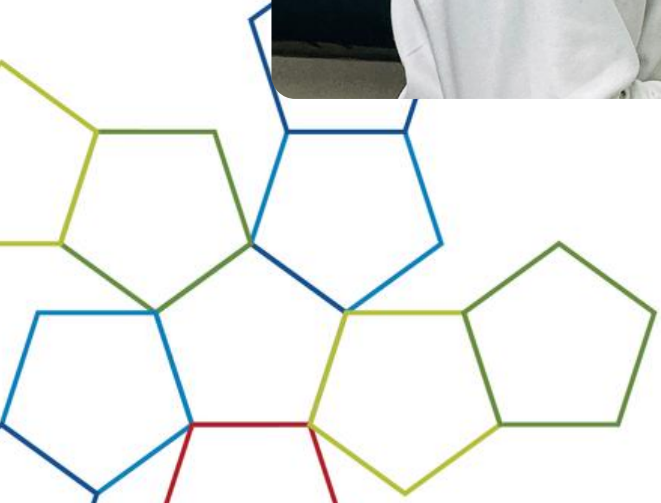

The Technology Department at Grupo Dynasol's Altamira, Mexico plant hosted the **National Asphalt Binder Technician Certification (NBTC)** program by the **Asphalt Institute** on August 22, 2024.

This program arose from the industry's need to reduce data variability in the "PG binder test" system.

Hosting this program sends a clear message that laboratory precision is a priority for our company and validates the technical staff qualified for these tests.

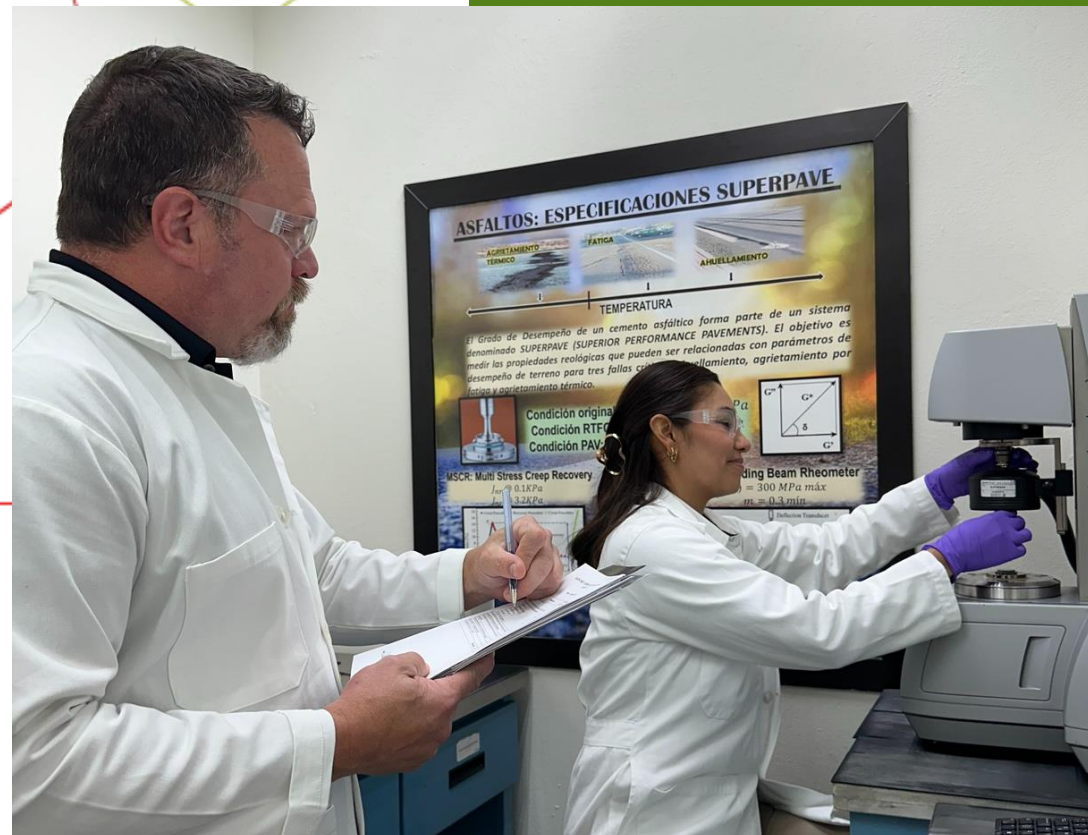

- ◆ Demonstrate the reliability and consistency of our technical staff and results.

ACKNOWLEDGEMENTS

As a Technology laboratory, we are constantly striving to adopt new standards with the goal of being one of the companies with highly qualified personnel.

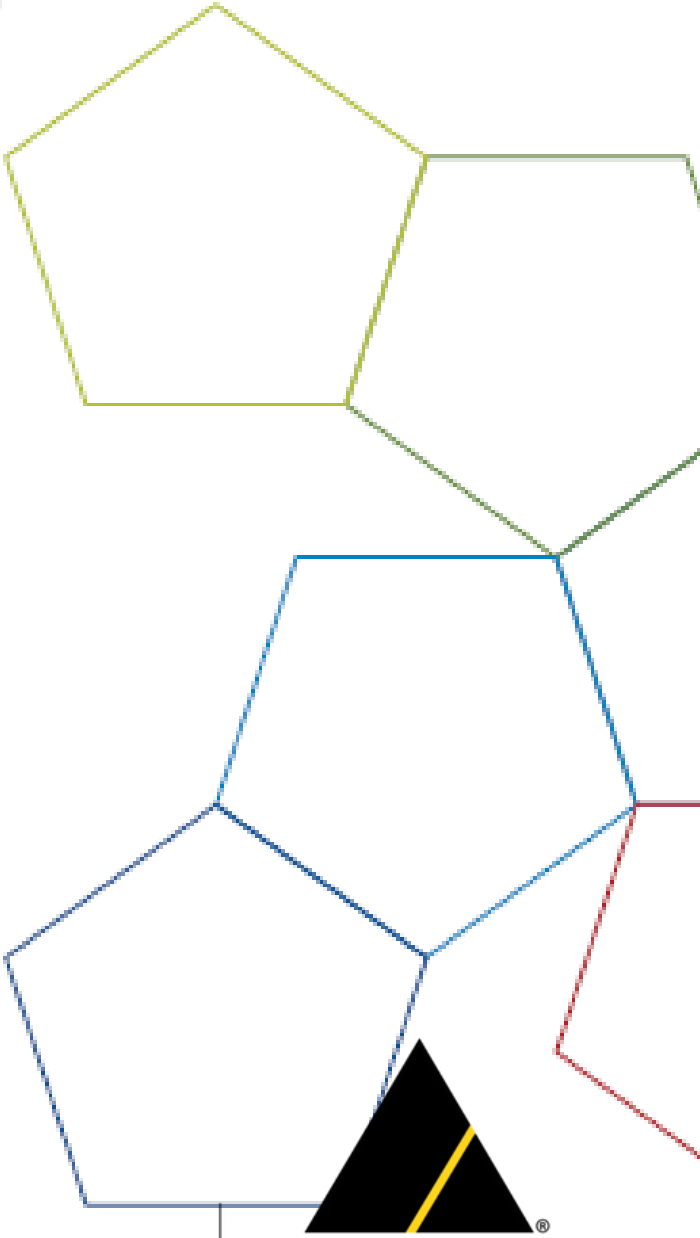

The program includes a course format using the MS-25 as support for this purpose. It features a review session followed by theoretical and practical evaluations to test the knowledge and skills of the staff.

During the program, two re-certifications were obtained for previously certified technicians, and three new certifications were awarded to new personnel in the asphalt area.
